For practicality, 22 AWG wire (MIL-C-27500/18-22) will generally be used for all circuits carrying up to 3 A loads, and will be protected by a 5 A circuit breaker or other current-limiting device. Alternatively, 24 AWG wire (MIL-C-27500/18-24) may be used for circuits carrying only negligible current.

Description. Deterioration in an aircraft electrical wiring interconnection system (EWIS) is often difficult to identify and repair. The EWIS on many older aircraft still in service was often designed on the 'fit and forget' principle, but both age itself and inadvertent collateral damage during unrelated maintenance or routine inspections cause airworthiness problems.
