Here's a breakdown of metals commonly used in sheet metal fabrication.

Aluminum is known for being a lightweight metal. It's a relatively strong material and can hold up to a NEMA 3 specification. It's more expensive than carbon steel, but not as expensive as copper. One disadvantage to aluminum is that it doesn't hold up to heat, and therefore must be TIG welded. Carbon steel is one of the most widely used metals in sheet metal fabrication. It's a metal alloy made up of iron and ...
