Ethnographic analysis, or the study of ethnography, is a branch of the social sciences that involves the direct study of people and cultures. The purpose of ethnographic analysis is to allow scientists to observe their subjects on the ground level, interacting with them as another person would instead of creating a scientist-subject relationship. Ethnographic research is designed to produce both descriptive, scientific observations and data that can represent a culture mathematically.

Analysis and Interpretation of Ethnographic Data 2nd ...

In this respect, the credibility of an ethnographic study essentially rests on the observer's ability to identify and record the relevant observations. The necessary observer skills have been discussed elsewhere in Research Design Review – for example, "The Importance of Analytical Sensibilities to Observation in Ethnography."

Ethnography: Mitigating Observer Bias | Research Design Review

The purpose of autoethnographic data analysis and interpretation is to gain the cultural understanding of the relationship between self and others (society).

Autoethnography for Palmer

Ethnography (from Greek ἔθνος ethnos "folk, people, nation" and γράφω grapho "I write") is a branch of anthropology and the systematic study of individual cultures. In contrast with ethnology, ethnography explores cultural phenomena from the point of view of the subject of the study.
