The teaching of games is a central component of any physical education or youth sport programme. Contemporary Developments in Games Teaching brings together leading international researchers and practitioners in physical education and sports coaching to examine new approaches in games teaching and team sport coaching that are player/student-centred and inquiry-based. The book aims to bridge the gap between research and practice by exploring contemporary games teaching from pedagogical, policy and research perspectives. It offers interesting new commentary and research data on well-established models such as Teaching Games for Understanding (TFfU), Game Sense, Play Practice and the Games Concept Approach (GCA), as well as introducing innovative and exciting approaches emerging in East Asia, including Singapore and Japan. Representing the most up-to-date survey of new work in contemporary games teaching around the world, this book is invaluable reading for any student, researcher, in-service teacher or sports coach with an interest in games teaching or physical education.

This book offers new perspectives on game-based coaching (GBC), one of the most important practices for session design and instructional delivery in sport coaching. GBC emphasises the sport coach as educator and the development of "thinking players", and this book demonstrates what that means in practice. It brings together leading and innovative thinkers and practitioners in coaching pedagogy, and aims to stimulate reflection by the reader on their own coaching practice. Reviewing recent theoretical developments and current research in GBC, the book provides in-depth examples on how research can be applied in practice, including the use of digital video games, immersive scenario-based coaching narratives, and the Game Sense approach as "play with purpose". Representing the most up-to-date and engaging introduction to the theory and practice of GBC, this book is invaluable reading for all students of physical education and sport coaching, as well as practising coaches and coach educators.

This work aims to deepen our understanding of the role played by technical guidelines and tools for the design, construction and operation of healthcare facilities, ultimately establishing the impact of the physical environment on staff and patient outcomes. Using case studies largely drawn from the UK, Europe, China and Australasia, design approaches such as sustainability (e.g. targets for energy efficiency, carbon neutrality, reduction of waste), evidence-based design (EBD), and Post-Project Evaluation (PPE) are examined in order to identify policies, mechanisms and strategies that can promote an integrated learning environment that in turn supports innovation in healthcare.
