Food Safety Engineering is the first reference work to provide up-to-date coverage of the advanced technologies and strategies for the engineering of safe foods. Researchers, laboratory staff and food industry professionals with an interest in food engineering safety will find a singular source containing all of the needed information required to understand this rapidly advancing topic. The text lays a solid foundation for solving microbial food safety problems, developing advanced thermal and non-thermal technologies, designing food safety preventive control processes and sustainable operation of the food safety preventive control processes. The first section of chapters presents a comprehensive overview of food microbiology from foodborne pathogens to detection methods. The next section focuses on preventative practices, detailing all of the major manufacturing processes assuring the safety of foods including Good Manufacturing Practices (GMP), Hazard Analysis and Critical Control Points (HACCP), Hazard Analysis and Risk-Based Preventive Controls (HARPC), food traceability, and recalls. Further sections provide insights into plant layout and equipment design, and maintenance. Modeling and process design are covered in depth. Conventional and novel preventive controls for food safety include the current and emerging food processing technologies. Further sections focus on such important aspects as aseptic packaging and post-packaging technologies. With its comprehensive scope of up-to-date technologies and manufacturing processes, this is a useful and first-of-its kind text for the next generation food safety engineering professionals.

The thoroughly updated 4th Edition of the “Complete Guide for MAT and other MBA entrance exams” is specially designed for MBA entrance exam. The USP of the book lies in its coverage of syllabus, exhaustive theory, techniques to master problem solving and Fully Solved exercises. 1. The book contains Comprehensive Sections on : • Mathematical Skills • English Language • Data Analysis & Sufficiency • Intelligence and Critical Reasoning • Indian and Global Environment 2. The book provides detailed theory along with exhaustive question bank in the form of exercise at the end of each chapter. The solutions have been provided to each and every question. 3. The Indian and Global Environment has been thoroughly revised and updated with latest current affairs including business questions as well. The exercises has also been updated with latest questions. 4. The book contains a lot of past MAT questions asked in the previous years. To summarize, the book is aimed to serve as one stop solution for all major MBA Entrance Exams - CMAT, NMAT, SNAP, MH-CET, IRMA, ATMA, ICET, etc.

This book is a step-by-step guide to producing a sound foundation for advertising: one that will serve as the springboard to inspire powerful creative expression. Rich in cases from the evolving Indian context, Planning for Power Advertising offers an understanding of how strategic advertising is created. It takes the reader through cases and analyses of what worked or did not work in the marketplace. Anand Halve involves the reader throughout in exercises with Action Points at the end of most chapters—an approach that brings alive the concepts within, and helps readers discover the theory in practice. For advertising professionals, this is a manual to create a robust advertising brief. For students of advertising and marketing, Planning for Power Advertising is a simulation exercise from which they will learn how to apply the principles that will help them in their future careers. And for professionals in areas related to advertising—such as media, event management and PR—this book provides an insight into how the strategic underpinning of advertising is built.

Interested in the Genetic Algorithm? Simulated Annealing? Ant Colony Optimization? Essentials of Metaheuristics covers these and other metaheuristics algorithms, and is intended for undergraduate students, programmers, and non-experts. The book covers a wide range of algorithms, representations, selection and modification operators, and related topics, and includes 71 figures and 135 algorithms great and small. Algorithms include: Gradient Ascent

techniques, Hill-Climbing variants, Simulated Annealing, Tabu Search variants, Iterated Local Search, Evolution Strategies, the Genetic Algorithm, the Steady-State Genetic Algorithm, Differential Evolution, Particle Swarm Optimization, Genetic Programming variants, One- and Two-Population Competitive Coevolution, N-Population Cooperative Coevolution, Implicit Fitness Sharing, Deterministic Crowding, NSGA-II, SPEA2, GRASP, Ant Colony Optimization variants, Guided Local Search, LEM, PBIL, UMDA, cGA, BOA, SAMUEL, ZCS, XCS, and XCSF.

This newly reissued debut book in the Rutgers University Press Classics Imprint is the story of the search for a rocket propellant which could be trusted to take man into space. This search was a hazardous enterprise carried out by rival labs who worked against the known laws of nature, with no guarantee of success or safety. Acclaimed scientist and sci-fi author John Drury Clark writes with irreverent and eyewitness immediacy about the development of the explosive fuels strong enough to negate the relentless restraints of gravity. The resulting volume is as much a memoir as a work of history, sharing a behind-the-scenes view of an enterprise which eventually took men to the moon, missiles to the planets, and satellites to outer space. A classic work in the history of science, and described as “a good book on rocket stuff...that’s a really fun one” by SpaceX founder Elon Musk, readers will want to get their hands on this influential classic, available for the first time in decades.

Streptococci and enterococci are the etiologic agents of infectious diseases that rank among the most severe in human pathology. The diagnosis, antibiotherapy, and prevention of the streptococcal diseases have improved considerably. However, the reemergence of severe streptococcal and enterococcal diseases constitutes a growing public health concern, which remains open to scientific and medical debate. The XIIIth Lancefield International Symposium on Streptococci and Streptococcal Diseases, held at Institut Pasteur, Paris, France, September 16--21, 1996, attracted 505 participants from 43 countries. Twenty-two percent of the participants were students, a clear sign of the intense interest in this field. Of the 390 presentations made at the symposium, 260 were submitted as manuscripts for the Proceedings; we have included 249 of these in this volume. This symposium provided a forum for the presentation of the most recent findings and approaches to understanding several important fields, such as new aspects of infection, bacteria-host interactions, epidemiology, and molecular genetics of streptococci and enterococci. Over the last three years, the study of these subjects has expanded as increasingly sophisticated methods of molecular analysis have been applied to investigate the biology of pathogenic streptococci and enterococci. Virulence, vaccine strategies, genetics, antibiotic resistance, epidemiology, and immunology are now being examined through the lens of molecular biology. The application of recently developed techniques to this field will continue to yield insight into the mechanism by which these organisms cause disease.
