strictly to telling the story of how this legendary airplane was designed and built using rare original factory photos, documents, and unique engineering information.

MUSTANG - Considered by many to be the best fighter aircraft of the Second World War. This new book by aviation historian Larry Davis begins with Mustang production in early 1941 with the British Air Purchasing Committee order for 320 aircraft in August 1940 with the first Mustang I, RAF serial AG 345, rolling off the Inglewood, California assembly line on 16 April 1941. The later P-51D is considered by many to be the ultimate Mustang and is covered here in its variety of

Online Library North American P 51 Mustang

markings and warfronts. The P-51H lightweight and the P-82 Twin Mustang are also covered in rare photos including color.

The North American P-51 Mustang was one of the most successful and effective fighter aircraft of all time. It was initially produced in response to a 1940 RAF requirement for a fast, heavily-armed fighter able to operate effectively at altitudes in excess of 20,000ft. North America built the prototype in 117 days, and the aircraft, designated NA-73X, flew on 26 October 1940. The first of 320 production Mustang Is for the RAF flew on 1 May 1941, powered by a 1,100hp Allison

American P 51 Mustang

V-1710-39 engine. RAF test pilots soon found that with this powerplant the aircraft did not perform well at high altitude, but that its low-level performance was excellent. It was when the Mustang airframe was married to a Packard-built Rolls-Royce Merlin engine that the aircraft's true excellence became apparent. Possessing a greater combat radius than any other Allied single-engine fighter, it became synonymous with the Allied victory in the air. During the last eighteen months of the war in Europe, escorting bomber formations, it hounded the Luftwaffe to destruction in the very heart of Germany. In the Pacific, operating from advance bases, it ranged over the

American P 51 Mustang

Japanese Home Islands, joining carrier-borne fighters such as the Grumman Hellcat to bring the Allies massive air superiority. Yet the Mustang came about almost by accident, a product of the Royal Air Force's urgent need for new combat aircraft in the dark days of 1940, when Britain, fighting for survival, turned to the United States for help in the island nation's darkest hour.

The North American P-51 Mustang remains one of the most famous and recognizable aircraft in the world to this day. Nimble and fast--qualities that led the Mustang to be used even today in air races--the aircraft was forged in battle. The early Mustangs, often referred to as "Razorback

Online Library North

American P 51 Mustang

Mustangs," were the first of the type to be built and helped stem the tide of Axis aggression in WWII. This, the first of two volumes on this iconic aircraft, explores the early P-51s. The history of this iconic aircraft is presented through carefully researched archival photos, as well as photographs of preserved examples, thereby illustrating not only the combat use of the Mk. I, A, B, and C P-51 models, but also the details of its design and construction. Large, clear photos, coupled with descriptive and informative captions, put the reader on the airfield and in the sky with this historic aircraft. Part of the Legends of Warfare series.

The Mustang was born from a

American P 51 Mustang

British WW2 specification to North American during 1940. The prototype was completed within 117 days but the RAF was not happy with the aircraft's performance and suggested replacing the V-12 Allison with the more powerful RR Merlin. The result was a superbly fast and maneuverable aircraft that had the range to escort Allied bomber forces on raids deep into occupied Europe. A total of 15,469 of the type were built and used in combat until the Korean War. This book contains the world famous color profiles created by Dave Windle of the type in different operational modes, configurations and color schemes. Martin Bowman has written detailed descriptions and

photographs to create the perfect enthusiasts' reference.

Mustang Designer tells the story of American wartime fighter development, including engines and armaments, as part of a nationwide program of aircraft builders and fliers, focusing on Edgar Schmued, the designer of the Mustang. The P-51 Mustang is widely regarded as the best propeller-driven fighter that ever flew. What many might not realize is that the plane's developer was a German migrant. This book tells of how Schmued created a weapon that would ultimately prove lethal to the aspirations of those who had seized control over his native land.

1940 Onwards All Marks

Celebrate 75 years of the iconic World War II warbird that helped win the war and flew into the heart of American life. From D-Day to the Battle of the Bulge, through reconnaissance missions and combat, fighting flying bombs and Me 262 Stormbird jets, P-51 Mustang pilots saw it all during World War II. P-51 Mustang celebrates the 75th anniversary of the most iconic American warbird written by Cory Graff, lead curator at the Flying Heritage Collection--one of the world's most important collections and sites for warbird restoration. The entire story of this plane is here, starting with the astonishing fact that the P-51 Mustang was built in less than 120 days. This first

Online Library North

American P 51 Mustang

1940 Onwards All Marks

version was hardly a world-beater, and it took the addition of a Rolls-Royce-designed Merlin to make the Mustang a legend. These nimble and versatile fighters were able to escort Allied heavy bombers all the way to Berlin and back. In the Pacific, their long-range ability was pushed to its limit, with pilots flying 1,500-mile, eight-or-more-hour missions over water to attack Tokyo. On the home front, Graff profiles the impact manufacturing Mustangs had on workers in Los Angeles and Dallas. The United States wasn't finished with the P-51 Mustang after World War II. It was used in the Korean War and, afterwards, as a symbol and icon of American ingenuity. Graff explores the post-
