IPv6 addressing, it must create two separate sockets and listen separately on these sockets: Once for IPv4. Once for the IPv6 address family. Windows Vista and later offer the ability to create a single IPv6 socket which can handle both IPv6 and IPv4 traffic. For example, a TCP listening socket for IPv6 is created, put into dual stack mode, and bound to port 5001.

IPv6 Support - Win32 apps | Microsoft Docs

Important Internet Protocol version 6 (IPv6) is a mandatory part of Windows Vista and Windows Server 2008 and newer versions. We do not recommend that you disable IPv6 or its components. If you do, some Windows components may not function. We recommend that you use “Prefer IPv4 over IPv6” in prefix policies instead of disabling IPV6.

Guidance for configuring IPv6 in Windows for advanced users

This enhanced tool is the "netsh interface ipv6" command. Configuration changes made using the Netsh.exe commands are permanent and are not lost when the computer or the IPv6 protocol is restarted. The following command is available on Windows XP with SP1 and later to query and configure IPv6 on a local computer: Netsh.exe

Using Winsock - Win32 apps | Microsoft Docs

socket.has_ipv6¶ This constant contains a boolean value which indicates if IPv6 is supported on this platform. socket.BDADDR_ANY¶ socket.BDADDR_LOCAL¶ These are string constants containing Bluetooth addresses with special meanings. For example, BDADDR_ANY can be used to indicate any address when specifying the binding socket with BTPROTO_RFCOMM.

socket — Low-level networking interface — Python 3.8.4rc1 ...

Datagram sockets are sometimes called “connectionless sockets”. (Though they can be connect()’d if you really want. See connect(), below.) Stream sockets are reliable two-way connected communication streams. If you output two items into the socket in the order “1, 2”, they will arrive in the order “1, 2” at the opposite end.
