ISO 5167-3:2003 is applicable to nozzles and Venturi nozzles in which the flow remains subsonic throughout the measuring section and where the fluid can be considered as single-phase. In addition, each of the devices can only be used within specified limits of pipe size and Reynolds number.

While some companies use the ISO 5167 orifice gas flow equation, a vast majority of companies use the American Gas Association committee report 3 gas flow equation otherwise referred to as AGA 3 Gas Flow Equation for Orifice Plates. The flow rate computed by this equation is in standard units i.e Standard Cubic Feet per Hour or SCFH.

ISO 5167, divided into six parts, covers the geometry and method of use (installation and operating conditions) of orifice plates, nozzles, Venturi tubes, cone and wedge meters when they are inserted in a conduit running full to determine the flow rate of the fluid flow in the conduit. It also gives necessary information for calculating the flow rate and its associated uncertainty.

ISO 5167 will be divided into 4 parts: general (ISO 5167-1), orifice plates (ISO 5167-2), nozzles and Venturi nozzles (ISO 5167-3), and Venturi tubes (ISO 5167-4). Many users will only require the general part and one other part. The most significant areas of change from the existing ISO 5167-1 are given below.
