The previous standard for software quality measurement was ISO/IEC 9126. It categorized software quality into six characteristics (factors), which were further broken down into subcharacteristics (criteria). ISO 25010, however, introduced two additional factors, therefore the difference between the two lies mainly in how they categorize and define those characteristics of software quality requirements that we call non-functional. So, in short, we move from this—

Software Quality Standards—How and Why We Applied ISO 25010

ISO/IEC 25010. The quality model is the cornerstone of a product quality evaluation system. The quality model determines which quality characteristics will be taken into account when evaluating the properties of a software product. The quality of a system is the degree to which the system satisfies the stated and implied needs of its various stakeholders, and thus provides

value.

ISO/IEC then started work on SQuaRE (Software product Quality Requirements and Evaluation), a more extensive series of standards to replace ISO/IEC 9126, with numbers of the form ISO/IEC 250mn. For instance, ISO/IEC 25000 was issued in 2005, and ISO/IEC 25010, which supersedes ISO/IEC 9126-1, was issued in March 2011. ISO 25010 has eight product quality characteristics (in contrast to ISO 9126's six), and 31 subcharacteristics. "Functionality" is renamed "functional suitability".
