Jigs and Fixtures: Definition, Types, Differences ...

JIGS FIXTURES 1. It is a work holding device that holds, supports and locates the workpiece and guides the cutting tool for a specific operation 1. It is a work holding device that holds, supports and locates the workpiece for a specific operation but does not guide the cutting tool 2.

Introduction to JIGS AND FIXTURES

Jigs are usually not fixed to the table and often come in a portable and compact variant. Jigs are lighter in construction for quicker handling and clamping, with the table is often unnecessary. No additional device is required for locating the cutter with respect to the workpiece. During machining, jigs can be hold in position simple by hands.

12 Difference Between Jig And Fixture (With Advantages ...

Fixtures are specifically used to locate and support the piece in place for the tool to function. Unlike jigs, fixtures do not guide the tools for their operation. As the jigs guide the tool to work on the piece, it comes in contact with the machine. Fixtures do not come in contact with the tool for it to function.

Jig vs Fixture - Difference Between Two Woodworking Tools

Closely related terms are “jigs” and “fixtures.” A fixture holds your workpiece while it is being cut. A jig holds the workpiece and also guides the cutter. Given CNC, there’s little need for jigs as the g-code guides the cutter, so the term is largely related to manual machining.
