Identification
8th Edition | Wiley.

First published over 40 years ago, this was the first text on the identification of organic compounds using spectroscopy. This text presents a unified approach to the structure

determination of organic compounds based largely on mass spectrometry, infrared (IR) spectroscopy, as well as multinuclear and multidimensional

Robert M. Silverstein's
Spectrometric
Identification of
Organic Compounds
first appeared 50 years
ago. Throughout these
50 years, this book has
undergone many
editions and remained
one of the most
popular textbooks on
organic spectroscopy
for chemistry
undergraduates.

The book is subdivided into only 3 of the 4 classical methods for spectrometric identification of compounds: IR, MS, and finally NMR (covering ^1H , ^{13}C and very little of ^{19}F and ^{31}P). UV is left out in this edition, so maybe getting a hold of the old edition's UV chapter (which is extremely well-written) might be desired.
