Graph theory - solutions to problem set 9 Exercises 1. Let G be a k -connected graph. Show using the definitions that if G_0 is obtained from G by adding a new vertex v adjacent to at least k vertices of G , then G_0 is k -connected. Solution: Let S be such that $G_0 - S$ is disconnected. Let us show that $|S| > k$: Assume the contrary. Graph theory - solutions to ...

In graph theory, the removal of any vertex v and its incident edges E_v from a complete graph of order n results in a complete graph of order $n - 1$. Combining this fact with the above result, this means that every $(n - k) \times (n - k)$ square submatrix, $A_{[k+1:n, k+1:n]}$, of $A(K_n)$ possesses the eigenvalue 1 with multiplicity k and the eigenvalue $n - k + 1$ with multiplicity 1 .

In mathematics, graph theory is the study of graphs, which are mathematical structures used to model pairwise relations between objects. A graph in this context is made up of vertices which are connected by edges. A distinction is made between undirected graphs, where edges link two vertices symmetrically, and directed graphs, where edges link two vertices asymmetrically; see Graph for more detailed definitions and for other variations in the types of graph that are commonly considered. Graphs a

In the history of mathematics, Euler's solution of the Königsberg bridge problem is considered to be the first theorem of graph theory and the first true proof in the theory of networks, a subject now generally regarded as a branch of combinatorics. Combinatorial problems of other types had been considered since antiquity.

Graph Theory At first, the usefulness of Euler's ideas and of "graph theory" itself was found only in solving puzzles and in analyzing games and other recreations. In the mid 1800s, however, people began to realize that graphs could be used to model many things that were of interest in society.

In graph theory, edges, by definition, join two vertices (no more than two, no less than two). Suppose that we had some entity called a 3-edge that connects three vertices. Suppose that we had a 3-edge connecting vertices A,B,C. I would suggest that we could simply replace the 3-edge with 3 regular
