The excavation & lining of tunnel can be carried out under protection of shield Plenum process or compressed air tunnelling: In this process, the use is made of compressed air to prevent the collapse of sides and the top of the tunnel. Theoretically 0.003 N/mm² air pressure is equivalent to 305 mm of head of water.

This deep tunnel pump station is designed to dewater 160 MG of stored CSO flow in a 24 hour period. The pump station is 240 feet below ground, housed in an underground cavern that is 35 feet lower than the nearby tunnel storage system. The cavern is approximately 140 feet long, 56 feet wide, and 65 feet high. Read More

A tunnel is an underground passageway, dug through the surrounding soil/earth/rock and enclosed except for entrance and exit, commonly at each end. A pipeline is not a tunnel, though some recent tunnels have used immersed tube construction techniques rather than traditional tunnel boring methods.. A tunnel may be for foot or vehicular road traffic, for rail traffic, or for a canal.
