Wiring Closets: Finally, some homeowners build wiring closets. The closets essentially act like a breaker box but serve your home automation wiring and system needs. A wiring closet should be centrally located and contain patch panels and media servers. It may also house your router—though the rule about locating it centrally still applies.

What wiring do I need for a home automation system?

- Power requirements assume a single transmitter per cable.
- At startup, the power source must provide a minimum of 1.5 amps of short-term current per transmitter and not pull voltage below 18 VDC.
- Length and conductor diameter of the power cable must be sized to provide 18 VDC minimum at the power terminals, at a load current of 0.7 amps.
